DETAILED ACTION

Specification

The abstract of the disclosure is objected to because of the following informalities:

In line 12, change "arbitrary" to read "arbitrarily".

In line 16, change "to the glass substrate" to read "of the glass substrate".

Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 7 and 11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 7 recites the limitation "to form a vacancy only inside the glass substrate" is confusingly worded.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 8-10 and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Tumminelli '041.

Tumminelli discloses a glass substrate machining method comprising the steps of: machining a glass substrate by using a CO₂ laser; controlling an amount of air bubbles in the glass substrate to improve the

Art Unit: 3723

workability of the glass substrate; a thin insulator is formed on the glass substrate; forming a metal film through simple electroless plating, to improve the heat radiation property of the metal-film-formed portion (column 4, lines 1-41).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tumminelli in view of Umetsu '079.

Tumminelli is described above. Tumminelli does not specifically disclose that the insulator coating on the glass surface is inorganic. Umetsu discloses methods of machining work by laser beam where organic films are formed on the surface by coating and lamination (column 9, line 8; column 11, line 42; and column 10, line 41) so as to protect the surface of the substrate. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have applied organic film on the surface of the glass substrate of Tumminelli by coating and lamination as taught by Umetsu so as to protect the surface of the substrate.
